1 What will be the output of the following code snippet? def func(a, b): return b if a == 0 else func(b % a, a) print(func(30, 75))a) 10 **b)** 20 c) 15 **d**) **0** Answer:c]15 2 numbers = (4, 7, 19, 2, 89, 45, 72, 22)  $sorted\_numbers = sorted(numbers)$ even = lambda a: a % 2 == 0 even\_numbers = filter(even, sorted\_numbers) print(type(even\_numbers)) a) Int b) Filter c) List d) Tuple Answer:b]Filter 3) As what datatype are the \*args stored, when passed into a) Tuple b) List c) Dictionary d) None Answer:a]Tuple 4)  $set1 = \{14, 3, 55\}$  $set2 = \{82, 49, 62\}$ 

set3={99,22,17}

print(len(set1 + set2 + set3))
a) 105 b) 270 c) 0 d) Error Answer:d]ERROR
5) What keyword is used in Python to raise exceptions?
a) raise
b) try
c) goto
d) Except
Answer:a]Raise
<b>6)</b> Which of the following modules need to be imported to handle date time computations in Python?
a) timedate
b) date
c) datetime
d) Time
Answer:c]Datetime
7) What will be the output of the following code snippet?
print(4**3 + (7 + 5)**(1 + 1))
a) 248 b) 169 c) 208 d) 233 Answer:c]209
8) Which of the following functions converts date to corresponding time in Python?
a) strptime
b) strftime
c) both a) and b)
d) None
Answer:a]Strptime

**9**) The python tuple is \_\_\_\_\_in nature.

a) Mutable

b)immutable

c)unchangeable
d) none Answer:b]Immutable
<b>10</b> ) 10)
Theis a built-in function that returns a range object that consists series of integer numbers, which we can iterate using a for loop.
<ul> <li>A. range()</li> <li>B. set()</li> <li>C. dictionary{}</li> <li>D. None of the mentioned above</li> <li>Answer:a] Range()</li> </ul>
Question 11
Amongst which of the following is a function which does not have any name?
<ul> <li>A. Del function</li> <li>B. Show function</li> <li>C. Lambda function</li> <li>D. None of the mentioned above</li> <li>Answer:c]Lambda function</li> </ul>
Question 12
The module Pickle is used to
<ul> <li>A. Serializing Python object structure</li> <li>B. De-serializing Python object structure</li> <li>C. Both A and B</li> <li>D. None of the mentioned above</li> <li>Answer:c]Both A and B</li> </ul>
Question 13
Amongst which of the following is / are the method of convert Python objects for writing data in a binary file?
<ul> <li>A. set() method</li> <li>B. dump() method</li> <li>C. load() method</li> <li>D. None of the mentioned above</li> <li>Answer:b]Dump() method</li> </ul>

14	Amongst which of t	the following is	are the method used to	unnickling data fr	om a hinary file?
74	Amongst which of t	me tonowing is	are me memou useu to	umpicking uata m	um a umai v me.

- A. load()
- B. set() method
- C. dump() method
- D. None of the mentioned above

Answer:a]Load()

## 15 A text file contains only textual information consisting of .

- A. Alphabets
- B. Numbers
- C. Special symbols
- D. All of the mentioned above

Answer:d]All of the mentioned above

16 Which Python code could replace the ellipsis (...) below to get the following output? (Select all that apply.)

```
captains = {
  "Enterprise": "Picard",
  "Voyager": "Janeway",
  "Defiant": "Sisko",
}
```

Enterprise Picard,

Voyager Janeway

Defiant Sisko

a) for ship, captain in captains.items():

```
print(ship, captain)
```

b) for ship in captains:

```
print(ship, captains[ship])
```

c) for ship in captains:

print(ship, captains)

d) both a and b

## Answer:d]both a and b

**17**)

Which of the following lines of code will create an empty dictionary named captains?

- a) captains =  $\{dict\}$
- b) type(captains)
- c) captains.dict()
- d) captains  $= \{ \}$

Answer:c]captains.dict()

18) Now you have your empty dictionary named captains. It's time to add some data!

Specifically, you want to add the key-value pairs "Enterprise": "Picard", "Voyager": "Janeway", and "Defiant": "Sisko".

Which of the following code snippets will successfully add these key-value pairs to the existing captains dictionary?

```
a) captains{"Enterprise" = "Picard"}captains{"Voyager" = "Janeway"}captains{"Defiant" = "Sisko"}
```

b) captains["Enterprise"] = "Picard"captains["Voyager"] = "Janeway"captains["Defiant"] = "Sisko"

```
c) captains = {"Enterprise": "Picard","Voyager": "Janeway","Defiant": "Sisko",}
```

d) None of the above
Answer:b|captains{"Enterprise"}= "Picard"
Captains{"Voyager"}= "Janeway"
captains{"Defiant"}= "Sisko"

19) You're really building out the Federation Starfleet now! Here's what you have: captains = {

```
"Enterprise": "Picard",

"Voyager": "Janeway",

"Defiant": "Sisko",

"Discovery": "unknown",
```

Now, say you want to display the ship and captain names contained in the dictionary, but you also want to provide some additional context. How could you do it?

```
a) for item in captains.items():
print(f"The [ship] is captained by [captain].")
b) for ship, captain in captains.items():
print(f"The {ship} is captained by {captain}.")
c) for captain, ship in captains.items():
print(f"The {ship} is captained by {captain}.")
```

Answer:b]for ship,captain in captains.items()
Print(f"The {ship}is captained by {captain}."

20)

You've created a dictionary, added data, checked for the existence of keys, and iterated over it with a for loop. Now you're ready to delete a key from this dictionary:

```
captains = {
    "Enterprise": "Picard",
    "Voyager": "Janeway",
    "Defiant": "Sisko",
    "Discovery": "unknown",
}
```

d) All are correct

What statement will remove the entry for the key "Discovery"?

a) del captains
b) captains.remove()
c) del captains["Discovery"]
d) captains["Discovery"].pop()
Answer:c]Del captains["Discovery"]
